Erreur! Signet non défini

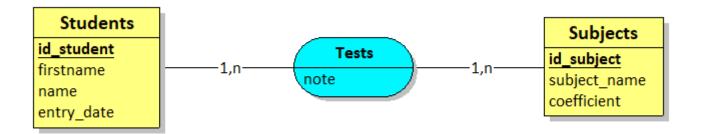

Énoncé 1

Persons = (<u>id person</u>, firstname, name, street_number, street, zipcode;

Vehicles = (<u>registration</u>, brand, mileage, release_date, #id_person);

Enoncé 2

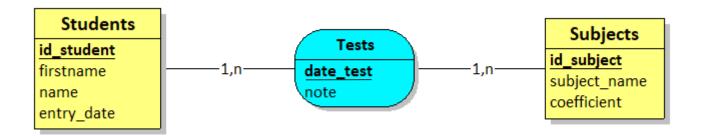

Students = (<u>id student</u>, firstname, name, entry_date);

Subjects = (<u>id subject</u>, subject_name, coefficient);

Tests = (#id student, #id subject, note DECIMAL(3,1));

Enoncé 3

Dans ce MCD, on souhaite que date_test fasse partie de la clé primaire composée de l'entitéassociation **Tests**.

La bonne pratique voudrait que date_test soit dans une entité distincte qui serait reliée par une association ternaire.

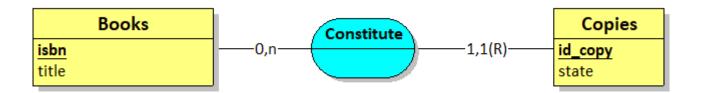

Si on respecte le sujet, le MLD serait le suivant :

Students = (id_student, firstname, name, entry_date);

Subjects = (id_subject, subject_name, coefficient);

Tests = (#id student, #id subject, date test, note);

Enoncé 4

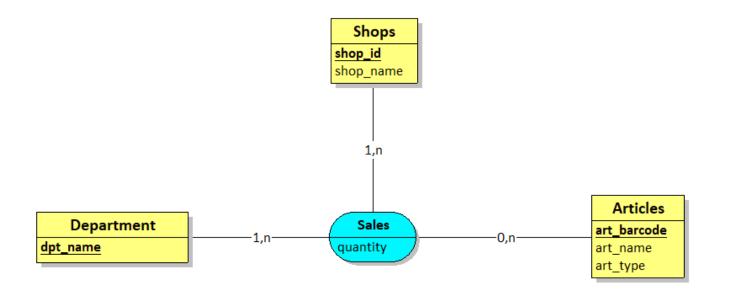

Books = (<u>isbn</u>, title);

Copies = (**#isbn, id copy**, state);

id_copy est un identifiant relatif qui dépend de **Books**. Dans le MLD, l'entité faible **Copies** possède donc une clé primaire composée de la clé étrangère isbn et de l'identifiant relatif id_copy.

Enoncé 5

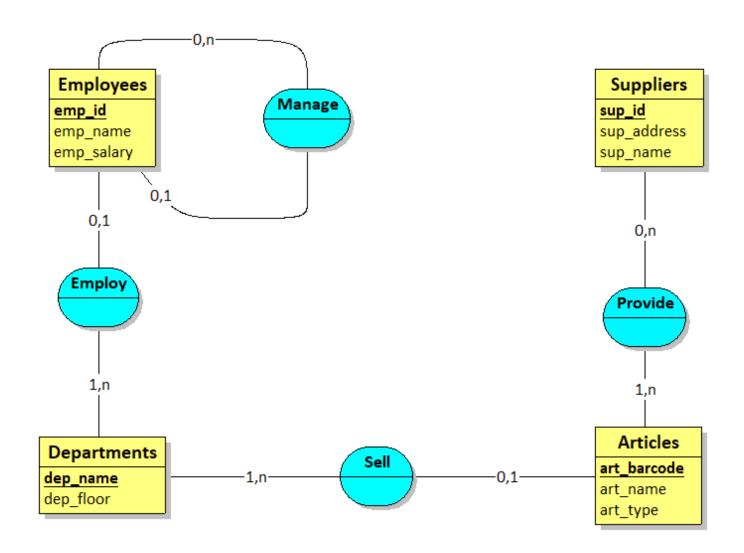

Department = (<u>dpt name</u>);

Articles = (<u>art_barcode</u>, art_name, art_type);

Shops = (shop id, shop_name);

Sales = (<u>#dpt_name</u>, <u>#art_barcode</u>, <u>#shop_id</u>, quantity);

Enoncé 6

Departments = (<u>dep name</u>, dep_floor);

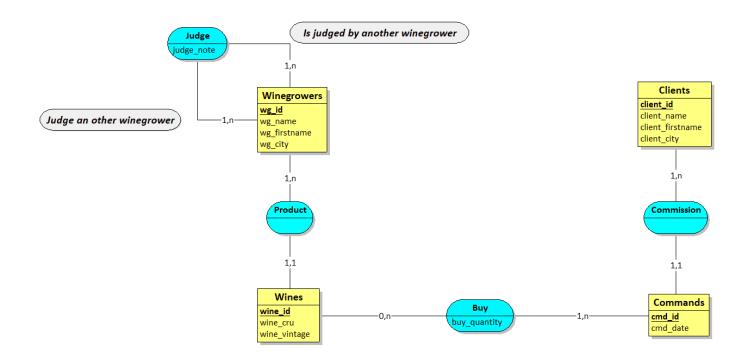

Articles = (<u>art_barcode</u>, art_name, art_type, #dep_name);

Suppliers = (**sup id**, sup_address, sup_name);

Employees = (<u>emp_id</u>, emp_name, emp_salary, #emp_id_1, #dep_name);

Provide = (**#art barcode**, **#sup id**);

Enoncé 7

Winegrowers = (<u>wg id</u>, wg_name, wg_firstname, wg_city);

Wines = (<u>wine id</u>, wine_cru, wine_vintage, #wg_id);

Clients = (<u>client_id</u>, client_name, client_firstname, client_city);

Commands = (**cmd_id**, cmd_date, #client_id);

Judge = (#wg id, #wg id_1, judge_note);

Buy = (<u>#wine_id</u>, #cmd_id, buy_quantity);
